

Remote Access Alarm & Control----- (Wired or Wireless

Instructions for access to the Electron Remote Alarm Access Panel

Remote Alarm Access Panel

Phone & Computer Access

Detect Alarms and even remotely control a Fire Pump controller in real time from any Cell Phone or PC.

Designed with the intent of simple installation and ease of use.

- ⇒ Connect the desired amount of inputs to be monitored. 5 Zones with 4 inputs in each zone for a total of up to 20 real time logged alarm events.
- ⇒ Connect up to 5 Outputs (one for each zone) to the Fire Pump controller.
- ⇒ Plug into any 5v 1.5a power source. The Electron Remote Access Panel will now power up starting the monitoring program and associated services.

At this time the Remote Alarm Access Panel is now fully functional locally and ready to be accessed remotely.

Once the Remote Alarm Access Panel is started as above. Look in your Wi-Fi connections list for a new **Secured connection** called **Controller**. Highlight the connection, Check Connect **Automatically** select **Connect**. The Network Security Key is (**ncpcs.com**) You must allow access to the PCs and Devices on this Network, select **Yes**.

Next open any Web Browser and in the address bar type in **10.0.0.1/rap** That's it..... !
